# Earthing Copper welding

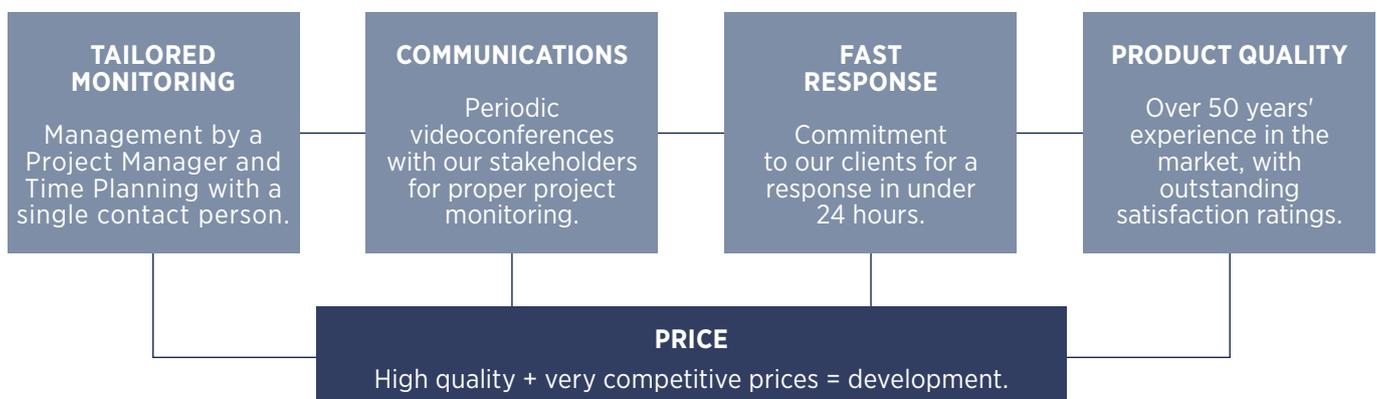

# #weareK L K:

We are a young 50-year-old company with a long history in the industry, with experienced people who have been joined by a new generation of talents with the desire to go further and with new market ideas.

The result of this is the catalog that we present here, a young but experienced catalog, sober but modern, with the main idea of bringing our business closer to our existing and future customers with the same quality and customer focus as ever.

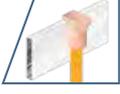

With this philosophy, we apply Quality, **Safety and Health, Environment policies**, throughout our business activities, based on the **ISO 9001, ISO 45001 and ISO 14001** standards.

# Earthing

## Why Earthing?

- **Main purpose: Limit ground voltage.**

The earthing system must ensure that there are no dangerous differences in potential in the installations, buildings and the surrounding area, while at the same time allowing fault currents or atmospheric discharges to be grounded.

- **The choice and installation of materials that ensure grounding must be such that:**

The earthing resistance value matches the installation's protection and operating standards and that this is maintained in this over time, taking into account the general requirements given in ITC-BT 24 and the Technical Instructions applicable to each installation.

A variety of elements can be used, such as plates, platens, etc. However, as it is the most widely-used type of electrode in the world, we recommend cylindrical rods, which are proven to be efficient and economical to install.

With a steel core and a thick layer of pure electrolytic copper molecularly bonded together, you get:

- \* **Great mechanical rigidity.**
- \* **Maximum corrosion resistance.**

The electrode burial depth should be measured from the top of the electrode and never less than 0.5 m. This ensures that the resistance of the earth connection does not increase above the rated value.

- **There are two ways to perform grounding with rodss:**

1. **Parallel system:** the most widely used in buildings and homes, as it does not require special machinery and is easy to install.
2. **Depth system:** used in confined spaces where rods cannot be installed in parallel. It consists of sinking a rod into the ground on top of another one. The two are connected with a coupling sleeve.

- **Applicable regulations for rods:**

- \* **UNE 21.056**
- \* **UNE 202006**

- **Minimum applicable dimensions:**

Ø 14,2 mm (steel-copper 100 µ)

- **Low Voltage Electrotechnical Regulation and its complementary technical Instructions.**

## 1. Earthing electrodes /

### 1.1 Earthing rods

## Copperbond rods

**Description** Manufactured from a high strength steel core which is applied a copper plating molecularly bonded to the steel.

**Material** **Core:** steel.  
**Plating:** copper.

All our rod electrodes are marked on the surface with the **KLK** logo and the corresponding type.

**Note:** Nominal and shank diameters do not correspond as they are threaded by rolling process.

### Type UNE 202006 - 100 microns

Types	Length. mm x Ø nominal dia (mm)	Ø Shank dia (mm)	Kg/U
1,5 UNE 202006 142 ①	1.500 x 14,2	14,2	1,875
2 UNE 202006 142 ①	2.000 x 14,2	14,2	2,500
1,5 100M 180*	1.500 x 18,0	18,0	1,875
2 100M 180*	2.000 x 18,0	18,0	2,500

Only supplied unthreaded.

\* Compliant with Standard copper thickness and length.

### Type E - 350 microns

Types	Cat. ref. Threaded	Type Self-coupled	Length (mm) x Ø nominal dia (")	Ø Shank dia (mm)	Kg/U
E-10 34	E-10 34-RR	E-10 34-AA	1.000 x 3/4"	14,20	1,875
E-15 34	E-15 34-RR	E-15 34-AA	1.500 x 3/4"	14,20	2,500
E-20 34	E-20 34-RR	E-20 34-AA	2.000 x 3/4"	18,00	1,875

### Type NU - 300 microns

Types	Cat. ref. Threaded	Length (mm) x Ø nominal dia (")	Ø Shank dia (mm)	Kg/U
15 NU 146 ②	15 NU 146 RR	1.500 x 16	14,6	2,025
20 NU 146 ②	20 NU 146 RR	2.000 x 16	14,6	2,700
25 NU 146	25 NU 146 RR	2.500 x 16	14,6	3,375
30 NU 146	30 NU 146 RR	3.000 x 16	14,6	4,050
15 NU 183 ②	15 NU 183 RR	1.500 x 20	18,3	3,150
20 NU 183 ②	20 NU 183 RR	2.000 x 20	18,3	4,200
25 NU 183	25 NU 183 RR	2.500 x 20	18,3	5,250
30 NU 183	30 NU 183 RR	3.000 x 20	18,3	6,300

Add "R" if threaded on one end and "RR" if threaded on both ends.

All rod electrodes are supplied in bundles of 5 units.

① Rods certified according to Standard: **UNE 202006:2019**

② Rods certified according to: **UNE 21056:1981/UNE 21056:2000 ERRATUM**

Unthreaded

Self-coupled

Threaded

Dimensions indicated are nominal

All our rods are marked on the surface with the **KLK** logo and the corresponding type. Other diameters and/or coating upon request.

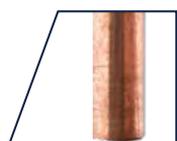

**Note:** Nominal and shank diameters do not correspond as they are threaded by rolling process.

### Type J - 250 microns

Types	Cat. ref. Threaded	Length (mm) x Ø Nominal dia (")	Ø Shank Dia. (mm)	Kg/U
J-10 58	J-10 58-RR	1.000 x 5/8"	14,3	1,30
J-15 58	J-15 58-RR	1.500 x 5/8"	14,3	1,95
J-20 58	J-20 58-RR	2.000 x 5/8"	14,3	2,60
J-25 58	J-25 58-RR	2.500 x 5/8"	14,3	3,25
J-30 58	J-30 58-RR	3.000 x 5/8"	14,3	3,90
J-10 34	J-10 34-RR	1.000 x 3/4"	17,3	1,90
J-15 34	J-15 34-RR	1.500 x 3/4"	17,3	2,85
J-20 34	J-20 34-RR	2.000 x 3/4"	17,3	3,80
J-25 34	J-25 34-RR	2.500 x 3/4"	17,3	4,75
J-30 34	J-30 34-RR	3.000 x 3/4"	17,3	5,70

Add "R" if threaded on one end and "RR" if threaded on both ends.  
 All rod electrodes are supplied in bundles of 5 units.

### Type CG - 50 microns

Ref.	Length x Ø Nominal Dia. (mm)	Ø Shank Dia. (mm)	Kg/U
10 CG 138	1.000 x 13,8	13,8	1,20
15 CG 138	1.500 x 13,8	13,8	1,80
20 CG 138	2.000 x 13,8	13,8	2,40

Only supplied unthreaded.

Dimensions indicated are nominal

## 1. Earthing electrodes /

### 1.1 Earthing rods

#### Galvanised steel rods

**Description** Stainless steel rods. The Self-coupling rods have a cone point and perforated head for its self-coupling.

**Material** **Core:** steel.  
**Plating:** copper.

##### Type AG - 80 microns

Ref.	Length x Ø Nominal Dia. (mm)	Ø Shank Dia. (mm)	Kg/U
10 AG 160	1.000 x 16	16	1,58
15 AG 160	1.500 x 16	16	2,63
20 AG 160	2.000 x 16	16	3,52

#### Stainless steel rods

**Description** Stainless steel rods. The Self-coupling rods have a cone point and perforated head for its self-coupling.

**Material** Stainless Steel AISI 420-X30Cr13/16 mm.

##### Type I

Types	Self- extensible	Length x Ø Nominal Dia. (mm)	Ø Shank Dia. (mm)	Kg/U
I-1.016	I-1.016-AA	1.000 x 16	16	1,50
I-1.516	I-1.516-AA	1.500 x 16	16	2,25
I-2.016	I-2.016-AA	2.000 x 16	16	3,00

All the rod electrodes are supplied in bundles of 5 units.

Dimensions indicated are nominal

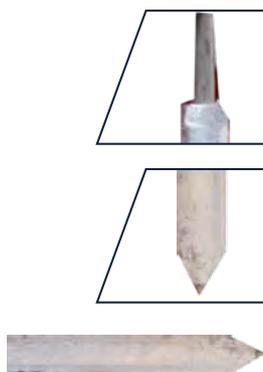

## Zinc rods (cathodic protection)

**Description** These electrodes have a steel core covered by a thick layer of metallic Zinc and are suitable to be used as sacrificial anodes in cathodic protection systems to reduce the corrosion of structures or buried steel deposits.

**Material** **Core:** electrogalvanised steel or hot-dip galvanised steel.  
**Covering:** Zinc bath in casting.

All our rods are marked on the surface with the **KLK** logo and the corresponding type. Other diameters and/or coating upon request.

**Note:** Nominal and shank diameters do not correspond as they are threaded by rolling process.

### ZN Rods

Ref.	Length x Ø Nominal Dia. (mm)	Ø Rod	Kg/U
10 Zn 30	1.036 x 30	13	5,05
15 Zn 35	1.500 x 35	12	10,17

The lengths and diameters of the steel-zinc rods refer to the zinc coating.

## Graphite Electrode

**Description** High performance electrode for grounding systems. Suitable for terrains with a high corrosion rate, or in extreme temperature conditions.

**Materials** Graphite.

### Graphite electrode

Ref.	Length (mm)	Ø	Kg/U
Graphite electrode	500	50	8

Dimensions indicated are nominal

## 1. Earthing electrodes /

### 1.2 Earthing rod accessories

## Driving hammer

**Description** Laminated steel hammer to drive rods of 20 mm maximum diameter.

**Material** **Head:** round laminated ST-52.  
**Body:** laminated steel pipe of 40x2 mm.  
**Finish:** heat resistant aluminium paint.

### MD-10

Ref.	Ø Nominal Dia. Rod size (mm)	Dimensions				Kg/ U
		L (mm)	A (mm)	D (mm)	d (mm)	
MD-10	20	1.150	150	100	40	10

## Coupling

**Description** Auxiliary part which ensures the coupling of the rod section with another to drive the rod deeper.

**Material** Brass.

### Coupling M for Threaded rods

Ref.	Dimensions			Kg/ U
	L (mm)	D (mm)	d (mm)	
M-16	80	23	20,50	0,115
M-58	70	21	18,50	0,115
M-20	70	27	20,00	0,170
M-34	70	24	21,50	0,170

## Stud

**Description** Hexagonal head stud designed to drive threaded rods.

**Material** Carbon steel.

### T

Ref.	T-16	T-58	T-20	T-34
Kg/U	0,09	0,09	0,16	0,16

Dimensions indicated are nominal

## Driving head

SN

S-AA

**Description** Auxiliary part to drive rods of 20mm maximum diameter. It ensures the mechanical driving forces are directly transferred without damaging the rod or the coupling.

**Material** **Body:** round calibrated steel S235 JR.  
**Finish:** bi-chromated.

### SN

Ref.	Ø Nominal Dia. rod size (mm)	Dimensions			Kg/ U
		L (mm)	D (mm)	d (mm)	
SN	20	110	30	40	0,41
S-AA	3/4"				0,46

## Additive gel

**Description** It allows to improve the resistivity of the ground. It will be installed in areas of severe pollution, high levels of marine and industrial corrosion and in areas of varying levels of soil resistivity.

## Bentonite

**Description** Material used as filler, ensures contact between the electrode and the ground.

## Graphite powder

**Description** Clay ore used in grounded wells. It allows to absorb moisture. Very used to bury deep electrodes.

Ref.	Kg/U	U
Additive Gel KLK	7	1
Sodium Bentonite	25	1
Graphite powder	25	1

AC-M 150 AL

AC-M 200 FE

## Metal earth inspect pits

**Description** Metal cover to close inspection pits, installed on site, with the earth sign stamped.

**Material** **AC-M 150 AL** Aluminium foundry.  
**AC-M 200 FE** Iron foundry.

### AC-M

Type	A	D	H	Kg/ U
AC-M 150 AL	210	170	50	1,11
AC-M 200 FE	250	200	120	8,00

Dimensions indicated are nominal

1. Earthing electrodes /  
 1.2 Earthing rod accessories

## Polyester earth inspection pits

**Description** Bottomless earth inspection pits. Made in polyester, with earthing sign stamped.

**Material** Polyester resin reinforced with fibreglass.

### AC-CP (round), AC-RP (square)

Type	D (mm)	A (mm)	H (mm)	Thickness (mm)	Kg/U
AC - CP 20	200	285	500	2-3	1,40
AC - CP 30	300	400	520	2-3	2,40
AC - RP 40	450	450	490	>2,5	2,90

AC-CP

AC-RP

## Polyester rectangular pit

**Description** Polyester rectangular pit. This pit is closed with bottom and with punched holes. Cover with earthing sign stamped.

**Material** Polyester resin reinforced with fibreglass.

### AC - RP 60

Type	A (mm)	D (mm)	H (mm)	Thickness (mm)	Kg/U
AC - RP 60	460	685	280	3	6

## PVC rectangular pit

**Description** Siphon pit, accessible with cover and passable.

**Material** PVC.

### AC - RP

Type	A (mm)	D (mm)	H (mm)	Kg/U
AC - RP 200	200	200	200	1,2
AC - RP 300	300	300	300	1,5
AC - RP 400	400	400	400	1,7

Dimensions indicated are nominal

## Earthing rod clamps

**Description** **KR and KR-30:** single-wire clamp for Cable/Rod connection formed by one hot-stamping body and tightening with hexagonal stud.

**KU:** single-wire clamp for Cable/Rod connection formed by two hot-stamping bodies and with U-bolt tightening.

**KB:** Two-wire clamp for Cable/Rod connection formed by two hot-stamped bodies and one U-bolt tightening.

**Material** **Body:** copper-rich alloy (Brass).

**Hardware:** stainless steel.

## 2. Connection for round and flat conductor /

### 2.1 Connectors

## Miscellaneous clamps

<b>Description</b>	<b>KZ:</b> two-cable cross clamp branch formed by three hot-stamped bodies and with hardware tightening.
	<b>KM:</b> single-piece clamp for fixing cable to metal structure formed by a hot stamped body. Cable tightening and fixing to the structure is done using a hexagonal screw. It cannot be mounted on concrete, since the screw head is embedded in the clip and does not allow rotation to screw it into the plug inserted into the concrete.
	<b>KML:</b> two-wire clamp to fix two cables to a metal or concrete structure formed by one hot-stamped body. The tightening is with one hexagonal screw.

<b>Material</b>	<b>Body:</b> copper-rich alloy (Brass). <b>Hardware:</b> stainless steel.

## 2. Connection for round and flat conductor /

### 2.1 Connectors

## Terminals and connectors

**Description** **TK.P:** terminal for cable, formed by a round body and one flat blade. The tightening of the cables is with hold-down nut.

**TK.T:** terminal for cable, formed by one round body and one flat blade. The tightening of the cable is with hexagonal bolt.

**Material** **Body and screw:** copper-rich alloy (Brass).  
**Hardware:** stainless steel.

### TK.P and TK.T

Dimensions indicated are nominal

## Cross connection

**Description** Connection terminal formed by two pieces, with hexagonal stud and thread on the bottom part.

**Material** Galvanised steel.

### RAC 8-10 and RAC 8-10/16

Ref.	Dimensions (mm)			Hardware	Capacity (mm)	Kg/U	U
	A	B	e				
RAC 8-10	40	40	2,5	M 10 x 30	8-10	0,10	50
RAC 8-10/16	48	44	2,5-3	M 10 x 40	8-10/16	0,12	50

## Terminal

**Description** Multiple-use connection terminal, with cross terminal, T and parallel terminal of three pieces, with thread on the bottom part.

**Material** Galvanised steel.

### RAG-30

Ref.	Capacity Ø (mm)	Kg	U
RAG-30	8-16/15-25	0,480	20

## Terminal

**Description** Clamp for reinforcement bar and bus-bar with stud M 10x40.

**Material** Galvanised steel.

### RPP-30

Ref.	Capacity Ø (mm)	Kg	U
RPP-30	6-22/30-40 mm	0,125	25

## Terminal

**Description** Terminal for round and flat conductors.

**Material** Galvanised steel.

### RDG-30

Ref.	Capacity Ø (mm)	Kg	U
RDG-30	7-10/7-10, 7-10/30, 30/30	0,25	25

Dimensions indicated are nominal

## 2. Connection for round and flat conductor /

### 2.2 Cross, splice and earthing connectors

#### Fixed earthing points

**Description** Stainless steel earthing terminal with 80 diameter head and threaded hole M 10/12/16 supplied with plastic protective cover.

**Material** **Exterior plate:** acier Inoxydable.  
**Rod:** hot-galvanised steel.

##### PT- M10/ M12 and PT- M16

Ref.	Rod Ø (mm)	Kg/U	U
PT-M 10 / M 12	10 x 200	0,300	5
PT-M 16	10 x 400	0,603	5

#### Fixed earthing points

**Description** Equipotential point fixed to the structure to provide fixing points for the earthing.

**Material** **Body:** bronze.  
**Hardware:** brass, 2xM10x25.

##### EP2P

Ref.	Rod Ø (mm)	Dimensions (mm)	Capacity (mm)	Kg/U	U
EP2P	10 x 50	52 x 52	25 x 3/Ø8-10	0,44	5

#### Connection clamp

**Description** Connection clamp for cable / bus-bar.

**Material** **Body:** hot-galvanised steel.  
**Hardware:** stainless steel.

##### RAC - 8/30X3,5

Ref.	Dimensions			Hardware	Capacity (mm)	Kg/U	U
	A	B	e				
RAC-8/30 X 3,5	58	30	2.5	2 x M 8 x 20	Ø8-Ø10/Ø8-Ø10 Ø8-Ø10/30	0,25	25

#### Anti-corrosion tape

**Description** Tape to protect the buried connections from corrosion.

**Material** Petrolatum.

##### RUBDENSO

Ref.	Dimensions (Length x width)	Kg	U
RUBDENSO	Roll of tape 10 m x 50 mm	0,75	1

Dimensions indicated are nominal

## Miscellaneous clamps

**Description** **GK:** two-wire clamp, formed by one machining hexagonal body. Tightening of the cables is with hold-down nut.

**KX and KXP:** single-wire clamp to support cable to metal structure, formed by one machining hexagonal body. The cable is tightened with a hold-down nut.

**KXR:** single-cable clamp to support cable to metal structure, formed by a mechanised round body. The cable is tightened with stay bolt.

Cable tightening is done by bolt.

**Material** **Body, nut, hold-down nut and bolt:** copper rich allow (Brass).

#### 4. Protection against-lightning /

##### 4.3 Supports

### Signage plate

<b>Description</b>	Signage plate in Spanish, English or French: Earthing.
<b>Material</b>	Aluminium.
<b>Dimensions</b>	10 x 10 x 10 cm.
<b>Weight</b>	110 g.

### Signage board

#### 4. Protection against-lightning /

##### 4.4 Accessoires for down pipes

### Clamp for flat / Round conductor

<b>Description</b>	Brass connection terminal made by hot-stamping for flat or round conductor. For bolt M6 DIN 912.
<b>Material</b>	Tinned copper-rich alloy (Brass).

#### BC-30/8

Ref.	Lenght (L: mm)	Capacity (mm)	Kg/U	U
BC 30-8	70	30 x 2 - 30 x 3,5 Ø6 - Ø8	0,40	1

Dimensions indicated are nominal

## Protection for flat conductor

<b>Description</b>	Protection for flat conductor of up to 30x4 mm supplied with 3 fixings.
<b>Material</b>	<b>Protection:</b> galvanised steel / stainless steel. <b>Fixings:</b> stainless steel.

### FP-30/2 and FP-30/2IX

Ref.	Length (mm)	Kg/U	U
FP-30/2	2.000	1,2	1
FP-30/2lx	2.000	1,2	1

## Digital meter CTR-8

<b>Description</b>	Digital Meter which allows counting the lightning discharges at an outdoor lightning protection installation. The digital screen enables directly reading the amount of impacts recorded. The recording of the lightning discharges and their memorisation does not need any exterior power supply, so it does not depend on the duration of the battery. Only the digital screen, directed by a front button requires a power supplied by a long-lasting lithium battery.
<b>Installation</b>	Installed directly on the down conductor. No interruption of the conductor is required which allows an excellent electrical continuity from the point to the earthing. The meter records the lightning power when it passes through the down conductor.
<b>Characteristics</b>	Meter conforming to standard UTE C17106 Minimum detection power( $I_d$ ) $> = 1$ kA Maximum power detection ( $I_{max.}$ ) $< = 100$ kA Lack of detection power ( $I_{nd}$ ) $= I_d / 3 = 333$ A Protection indexes IP 54

Dimensions indicated are nominal

## 4. Protection against-lightning /

### 4.4 Accessoires for down pipes

#### Meter CTR-8

<b>Description</b>	Meter with mechanical indicator which allows counting the lightning discharges at an outdoor lightning protection installation.
<b>Characteristics</b>	Meter conforming Standard UTE C-17-106 Minimum detection power (I <sub>d</sub> ) > = 0,7 kA Maximum detection power (I <sub>max.</sub> ) < = 100 kA Protection indexes IP 65

#### Meter CTR-8SA

<b>Description</b>	Digital Meter which allows counting the lightning discharges of an intensity between 1 kA and 100 kA. This meter is connected in series with a round conductor of 8 to 10 mm diameter or bus-bar of 30x2.
<b>Characteristics</b>	Conforming Directive CEM Sensitivity: 200A (8/20 μs) Minimum detection power (I <sub>d</sub> ) > = 0,7 kA Maximum detection power (I <sub>max.</sub> ) < = 100 kA (8/20 μs) Protection index: IP 65

#### Switch box

<b>Description</b>	Box made of insulating material which includes a switch used to check the earthing resistance in the transformer stations.
<b>Characteristics</b>	<b>Housing:</b> resistant polycarbonate at 960° C. <b>Connections:</b> electrolytic tin copper of 20x3 mm. <b>Connection terminals:</b> C <b>Feedthrough cones:</b> PVC

Dimensions indicated are nominal

## Disconnecting link

**Description** Disconnecting link for round conductor.

**Characteristics** **Body:** plastic.  
**Hardware:** brass.

### BCT

Ref.	Dimensions (mm)	Section Cable (mm <sup>2</sup> )	Kg/U	U
BCT-35	125 x 30 x 26	10-35	0,135	1

BCTI-50	150 x 45 x 70	10-50	0,350	1

## Test link

**Description** Test link for the disconnection of the underground power from the aerial and perform the correct measurement of the Earthing Resistance. Formed by three copper busbars fixed with two hexagonal screws. The fixing to the support is not included in the supply.

**Material** **Test link:** electrogalvanised copper bus-bar.  
**Hardware:** stainless steel.

### PT

Dimensions indicated are nominal

## Earthing bars

**Description** Equipotentiality earthing bar to mount on concrete formed by a copper bus-bar with KBH type clamps to connect the cables.

**Material** **Equipotentiality bus-bar:** electrogalvanised copper.  
**Clamps. Body:** copper-rich alloy (Brass).  
**Hardware:** stainless steel.  
**Fixings:** electrogalvanised steel.

For earthing bars with more clamps or combined upon request.

## KLK-weld procedure

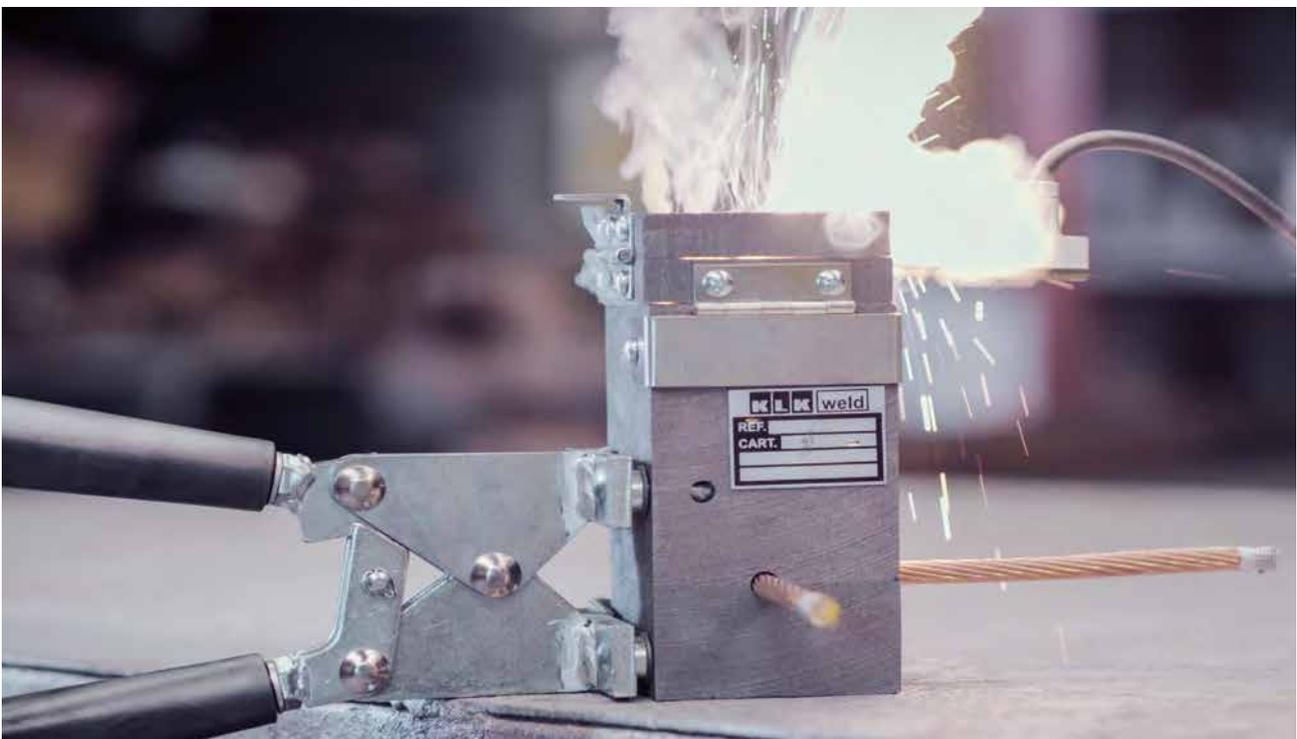

The **KLK-weld procedure** utilizes the high temperature reached during the reduction reaction between copper oxide and aluminum. The reaction takes place inside a graphite crucible-mold, into which the parts to be welded have been inserted; the melted metal from the aluminothermic reaction flows over the parts, melting them and forming a compact, homogeneous mass.

The reaction is so quick that the parts to be welded in the area surrounding the welding point, acquire a lower temperature than that obtained using other procedures. This is an important factor for protecting cable insulation or the physical characteristics of the parts to be welded.

**KLK-weld** can be used to weld copper to copper or copper to steel. For other materials, please contact us.

The **KLK-weld connection** is a perfect molecular weld and not just a mechanical contact. The alloy used has practically the same melting point as that of copper and usually has a cross-section approximately double than that of the conductors to be welded, so:

- \* Connections are not affected by high current surges. Tests have shown that the electrical conductors will melt before the connection when subject to high short-circuit current.
- \* Connection conductivity is at least equal or greater than that of the conductors welded.
- \* There is no possibility of galvanic corrosion at the welding point, as the conductors become an integral part of the connection.

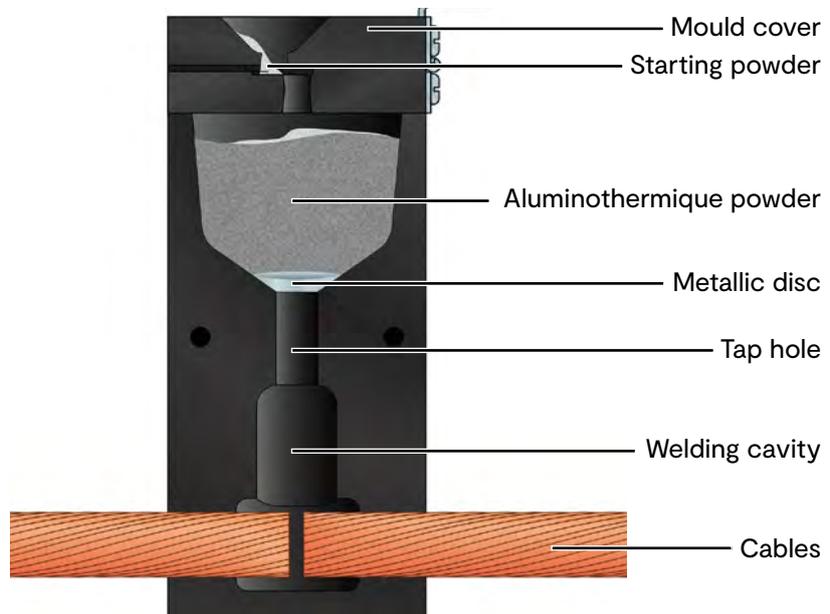

## 7. Copper aluminothermic welding /

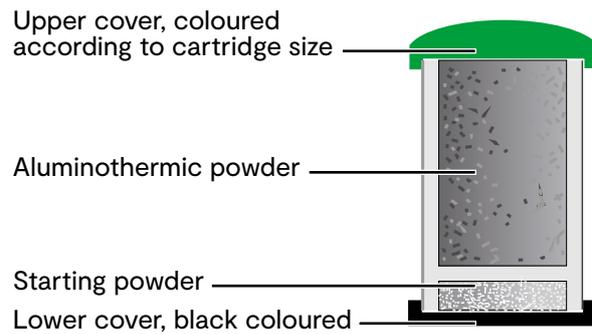

# KLK-weld mould

Molds for welding galvanized steel cable add to the end of the mold reference GS. (Example **CC-L35 GS**)

Welding molds for stainless steel wire add to the end of the SS mold reference. (Example **CC-L35 SS**)

# KLK-weld cartridges and discs

Units. / Box	20	20	20	20	10	10	10	10	10	10

## KLK-weld equipment

The **KLK-WELD equipment** is light and portable, and does not require any external power source, making it suitable for field use. Non-specialist personnel can achieve optimal electrical connections and high mechanical quality in a very short time

## 7. Copper aluminothermic welding /

# Tables of cables, bus-bars and earth rods

The moulds are cut to fit the type and size of copper conductors, concrete steel re-bars and earth rods shown on these tables. For any other type and/or size, it is necessary to confirm the actual overall diameter.

### Copper conductors (UNE 21012)

# Preparing material

## Preparing the cables

For a perfect weld the cable must be perfectly clean, dry and shaped.

- \* Cables treated with oil or grease should be cleaned with a degreaser (preferably a solvent that dries quickly and leaves no residue). In extreme cases, heat the cable with a blowtorch, which will completely remove grease or oil.
- \* Rusty cables should be polished with a wire brush.
- \* A cable that is wet or coated in mud will cause porous welding and emissions of molten metal out of the mold. It should be dried with a blowtorch to remove mud residues.
- \* Wrongly-cut or shaped cables will prevent the correct closing of the mold, causing leaks of molten metal.

## Preparing the grounding rods

The end of the rod to be welded must be perfectly clean, dry and flat, as for the cables.

## Preparing the steel surfaces

The surface must be free of rust and perfectly dry and flat.

- \* The layer of rust, paint, grease, or dirt should be cleaned using a grinding wheel preferably.
- \* Dry any moisture with a blowtorch.
- \* Galvanized surfaces should be cleaned without removing the zinc layer.

## Preparing the graphite mold

Moisture in the mold will produce a porous weld, so ensure it is completely dry before welding.

Before the first weld, heat the mold until it is too hot to touch, with a blowtorch, or by burning a cartridge. If you use a cartridge take care not to damage the clamps.

For subsequent welds, the heat generated will keep the mold at the correct temperature. If the interval between welds causes the mold to cool, start the procedure over again.

# Ignition procedure LsVIP

## Ignition procedure for aluminothermic welding charges for electrical connections

The **LsVIP KLK-weld** Ignition Procedure is the best solution to ignite the aluminothermic welding charges from the point of view of safety and cleanliness, as it prevents spattering from the crucible-mould during the aluminothermic reaction, minimizes smoke emissions and, furthermore, it enables the charge to be ignited at a certain distance from the mould, using the **KLK-weld Remote Ignition Device**.

7. Copper aluminothermic welding /  
7.9 LsVIP

The **LsVIP KLK-weld Ignition Procedure** uses a special lid that completely closes the mould crucible, so that it prevents spattering from the aluminothermic reaction. But at the same time it allows the release of overpressures within the crucible. Furthermore, the smoke emissions are much lower than in other ignition procedures.

The special lid used in the Ignition Procedure can be used either with the standard flint igniter or with the **KLK-weld Remote Ignition Device**. The same applies to the cartridges, ignition powder, and the other welding accessories, thus there is a complete versatility to use either of the two ignition options.

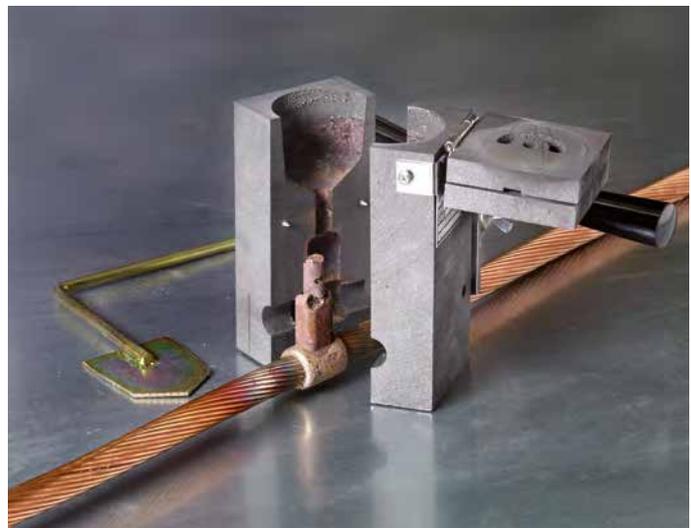

Apart from the supplying of moulds with the special lid used in the procedure (the LsVIP moulds) a quick fastening special lid can also be supplied, this can be easily fitted onto a mould that uses the usual lid. In this case, to use the special lid, it is sufficient to leave the usual lid open.

The **KLK-weld Remote Ignition Device** includes sufficient cable to allow the charge to be ignited at a certain distance from the mould where the reaction takes place. It only requires two standard batteries and it includes warning lights that indicate when the batteries are dead or if the fuse is properly inserted into the clamp.

For each ignition using the **KLK-weld Remote Ignition Device** it is also necessary to use a fuse, one end of which is inserted into the device clamp, the other end into the lid seat made for this purpose. The fuses are the only additional consumables for the remote ignition procedure.

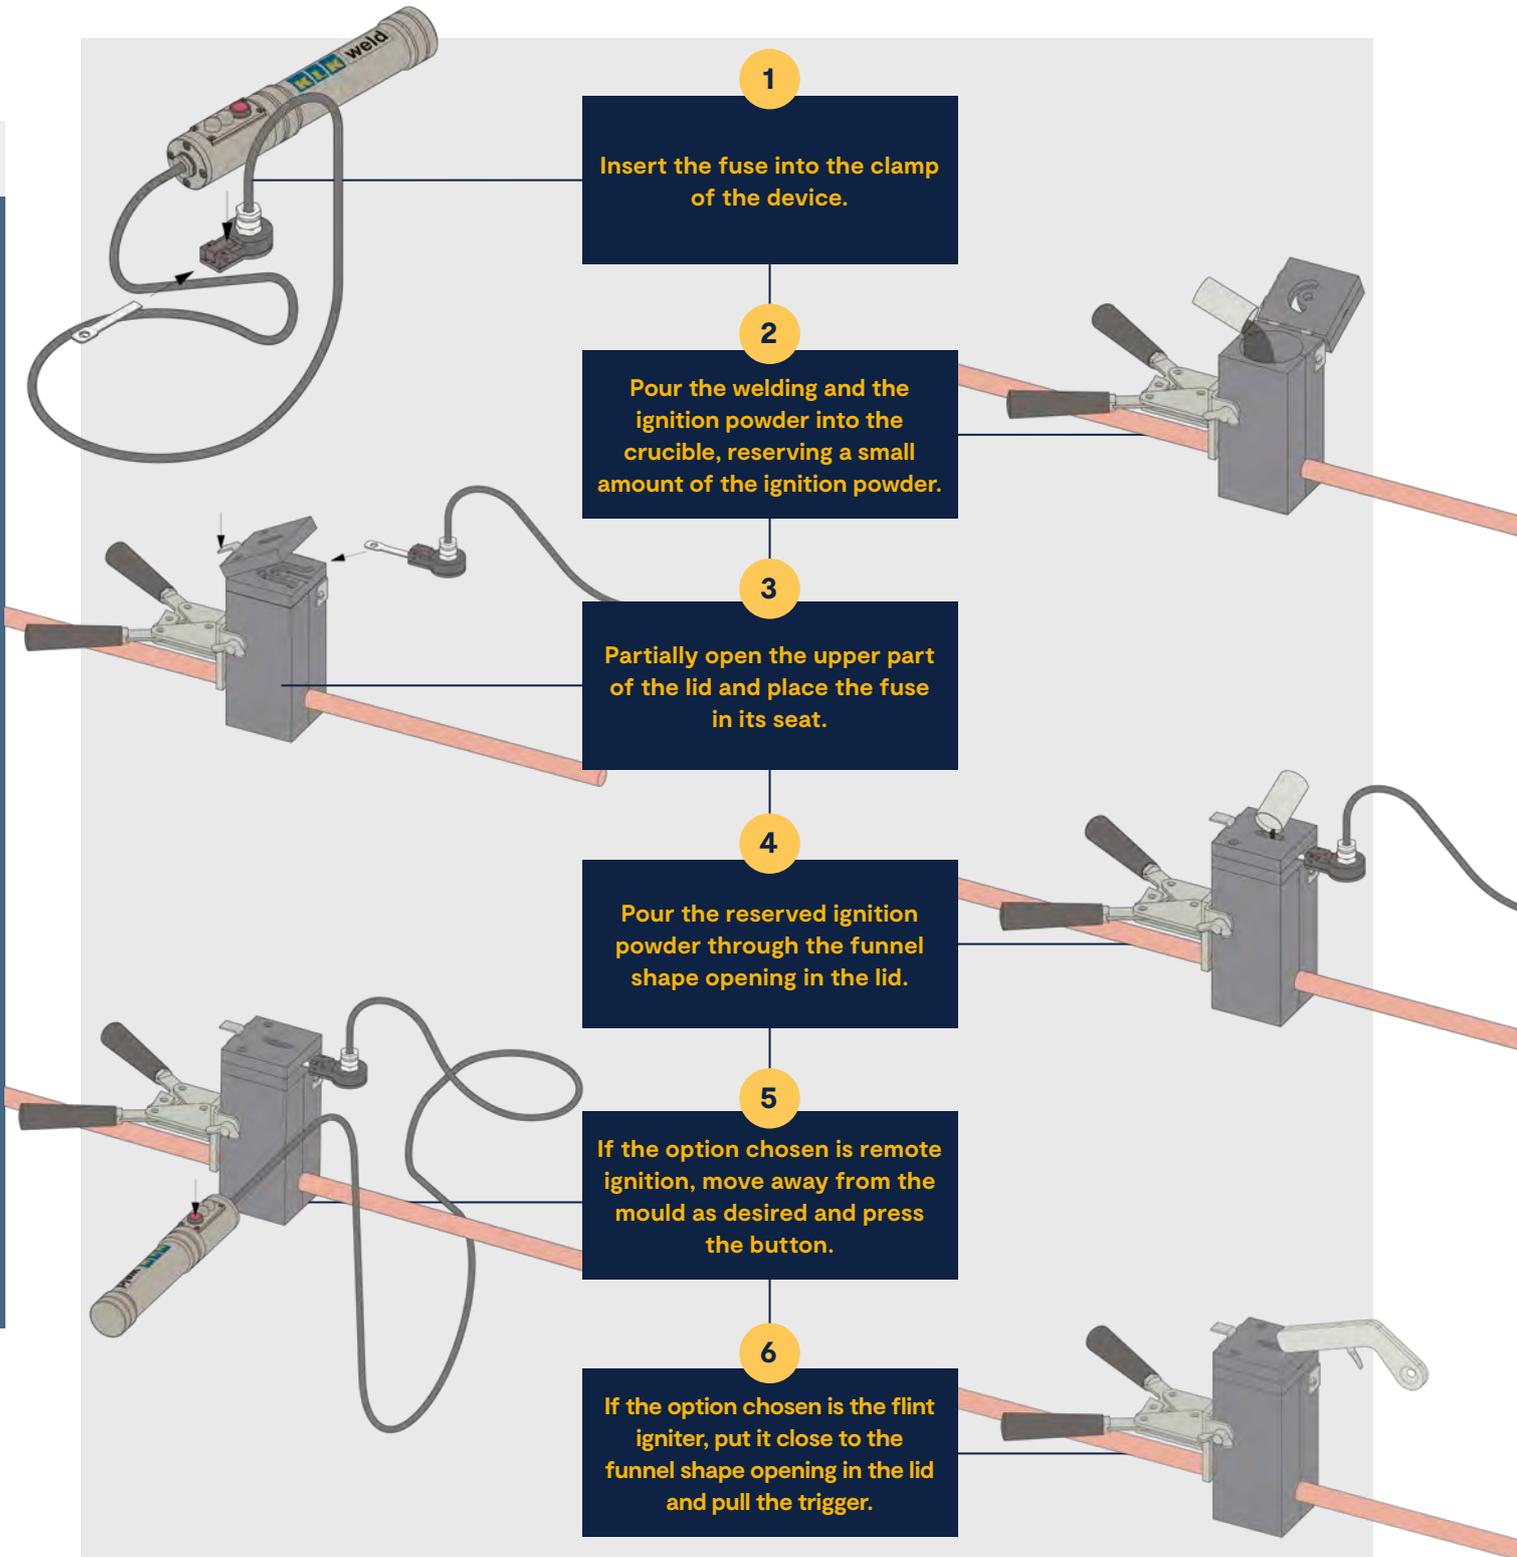

The connections achieved using the **KLK-weld** welding procedures, and in particular those achieved after using the **LsVIP Ignition Procedure**, are connections with a very high electrical conductivity, equal or greater to that of the welded conductor.

# Easy and quick to use

114

Copper aluminothermic welding

**1**  
Insert the fuse into the clamp of the device.

**2**  
Pour the welding and the ignition powder into the crucible, reserving a small amount of the ignition powder.

**3**  
Partially open the upper part of the lid and place the fuse in its seat.

**4**  
Pour the reserved ignition powder through the funnel shape opening in the lid.

**5**  
If the option chosen is remote ignition, move away from the mould as desired and press the button.

**6**  
If the option chosen is the flint igniter, put it close to the funnel shape opening in the lid and pull the trigger.

## Advantages of the LsVIP process

1. **KLK remote welding (LsVIP)** is done with the same cartridges and it is not necessary to have other references of special cartridges. Our cartridges preserve the two separate powders but together in the same packaging, to prevent the user from forgetting the ignition powder.
2. The same molds that are used in all other welds can be used, only the cover is changed, because our molds have interchangeable covers. Remote welding, safe welding without splashes and traditional welding can be carried out. If the mold is requested with Ref **LsVIP**, the mold already includes the cover.
3. Our ignition system allows ignition by remote control and with igniter.
4. Our remote ignition system uses a removable mold cover allowing a significant reduction of the smoke of the execution and canceling the possible projections coming from the aluminothermic reaction.
5. It is the best solution to comply with the most demanding safety conditions in this area of thermite welding.
6. Thanks to the versatility of the LsVIP process, the user or the client does not have to use other tools, other utensils and there is no need to change the conventional ignition system or to enlarge or modify your stock of material and you will never forget the ignition powder and therefore you can always weld.

# Virtual Reality Training

116

Copper aluminothermic welding

## Welcome to our Virtual Reality Center

Discover our virtual classroom and experience training in LsVIP aluminothermic welding using a virtual reality system that shows you all the necessary steps and allows you to acquire the skills you need to do real welding.

Find out more on [www.klk.es](http://www.klk.es)

# MEV Virtual Training Module

## Electric Cable Welding Procedure.

• **Reference:**

Aluminothermic Welding Procedure Virtual Training Module **LsVip**.

• **Coded:** 14321

- Application that simulates the complete aluminothermic welding procedure.
- User is guided by text instructions during the procedure.
- The procedure is guided to prevent wrong choices at any stage.
- You cannot go to the next step without having correctly carried out the previous one.

• **Contents:**

- 1 HTC VIVE VR goggles.
- 2 sensors.
- 2 controls.
- 1 rugged carrying case.
- Software with 3 licenses.

• **Recommended hardware:**

- CPU: Intel 7, equivalent or higher.
- OS: Windows 7 64-bit (Service pack 1) or higher.
- Monitor: At least one, Full HD.
- HTC- VIVE standard kit with base stations and controls.
- In addition to the cables included in the HTC-VIVE system, a "Mini Display Port" < - > "HDMI" cable is required to be able to clone the image of the laptop on any TV with HDMI input.

# Welding procedure ELPA- Tubo

## Welding of electric cable to steel pipe

118

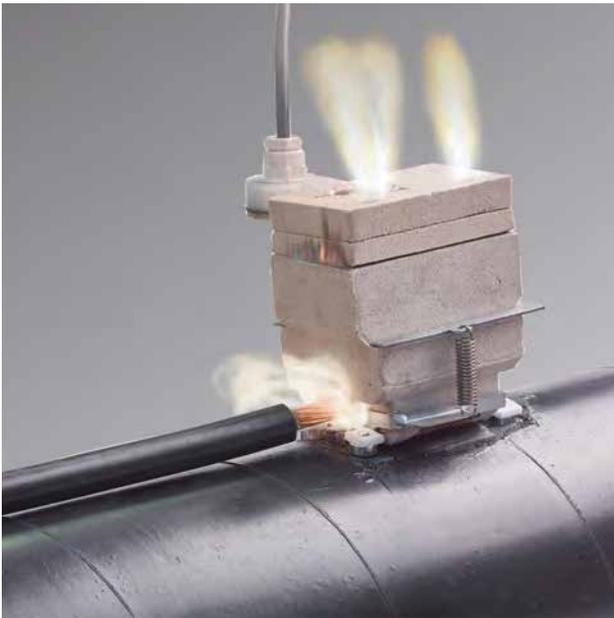

Copper aluminothermic welding

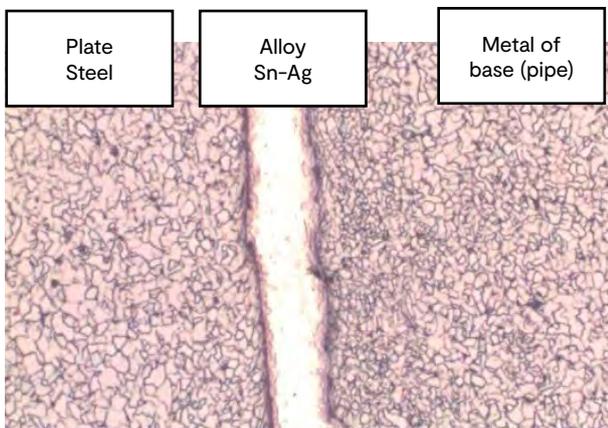

The **ELPA-Tubo KLK-weld** welding process offers the best solution for the electrical connection of copper cable on steel pipe in order to carry out cathodic protection of the pipe. The result is a connection with a very low electrical resistivity and a high mechanical resistance without modifying the steel of the pipe because its temperature never exceeds 450 °C.

Thanks to the fact that the clamping mechanism of the mold on the tube does not include an embracing element, it is not necessary to completely strip the tube to be welded, it suffices to discover only its upper part.

The electrical resistance of the connection is less than  $10^{-4} \Omega$ , and the resistance to mechanical shear at the plate / tube junction is greater than 25 kN.

Unlike other welding procedures, the ELPA-KLK welding tube procedure does not affect the tube steel. A micrographic study of the union by capillary welding between plate and tube reveals that the structure of the steel of the tube remains unchanged and without microcracks.

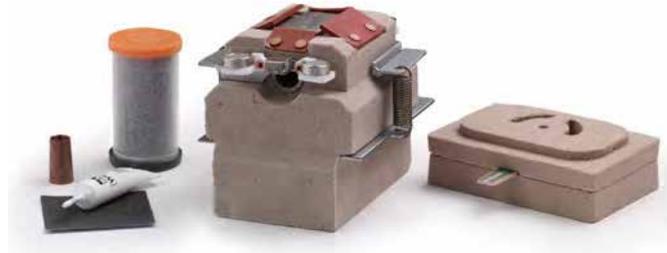

The **ELPA-Tube KLK-weld** welding procedure combines aluminothermic welding and tin-silver capillary welding, so that the latter uses part of the heat generated in the former. A ferritic steel plate is interposed between the conductive cable and the tube, absorbing the thermal impact of the thermite flow, and the plate being welded to the end of the cable. The plate incorporating a tin alloy on the contact side with the flat tube, the final union between the plate and the tube takes place due to the combination of the heat which melts this alloy and the force of a mechanism which presses the plate against the tube during solidification (force necessary to obtain a capillary welding without defects).

## 7. Copper aluminothermic welding /

### 7.11 Elpa Tubo

The KLPA **ELPA-Tubo welding** kit includes:

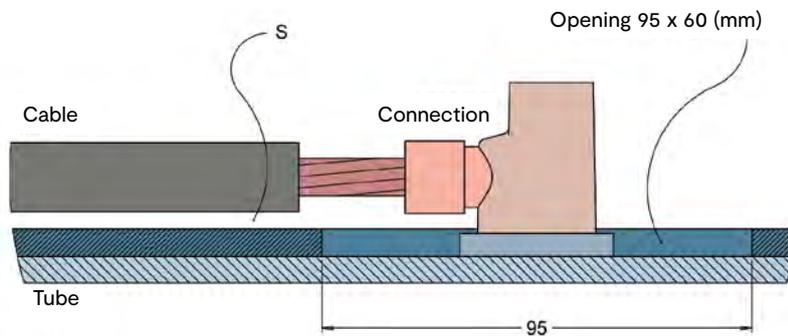

- Ceramic mold comprising a steel plate, a cable entry ring, a sealing disc, seals, a fuse cover for remote ignition and the clamping mechanism.
- Aluminothermic and ignition powder cartridge for welding.
- Flow dose.
- Additional sockets for other cable sections.
- User manual.

Each kit can be used in tubes of any diameter and is useful for soldering cables of different sections. Examples of possible kits are:

Denomination	Possible cables (*)		
Kit ELPA- Tubo 6 - 25	6 mm <sup>2</sup>	25 mm <sup>2</sup>	
Kit ELPA- Tubo 10 - 16 - 35	10 mm <sup>2</sup>	16 mm <sup>2</sup>	35 mm <sup>2</sup>
Kit ELPA- Tubo 50 - 70	50 mm <sup>2</sup>	70 mm <sup>2</sup>	

(\*) It is necessary to specify, in addition to the section, the diameter of each cable.

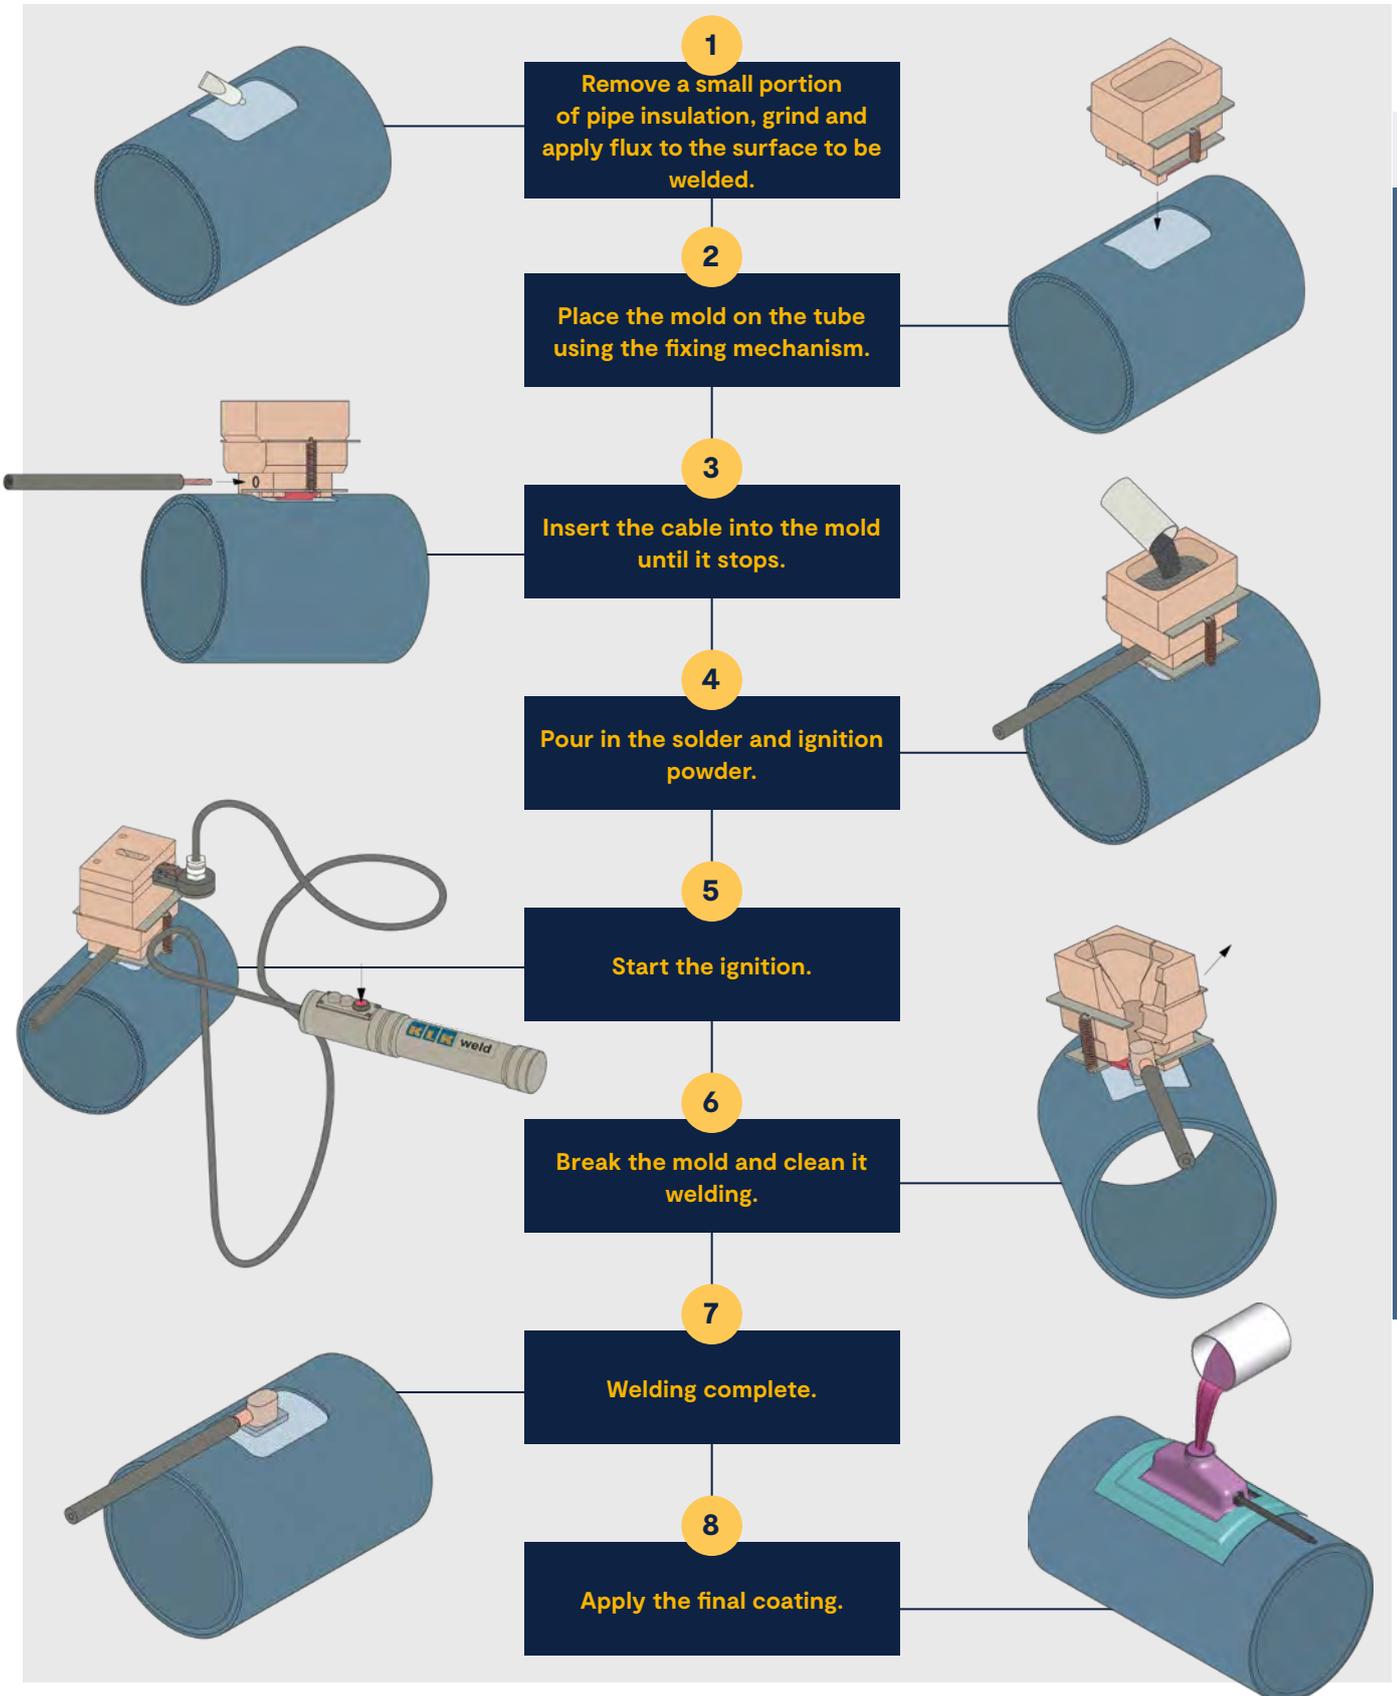

The area to be protected includes the opening made in the insulation of the tube, dimensions 95 x 60 (mm), the end of the cable from which the insulation had been removed over a length of 50 mm and the connection itself. The space between the cable and tube insulation (S) promotes the flow of coating resin in this area.

The ignition of the charge is carried out remotely, using the **KLK-weld** remote ignition device, with the possibility of also using the traditional ignition gun.

# Quick and easy to use

## Advantages of the ELPA-Tubo process

Advantages of the new low temperature welding process for electrical connections of conductive cables to the surface of steel pipes in gas pipelines, for cathodic protection of pipes.

The advantages of this low temperature welding process, which we have commercially called Elpa-Tubo, are listed below:

1. The connections obtained have excellent electrical conductivity.
2. The connections obtained have a high mechanical resistance.
3. The internal structure of the steel tube is not changed.
4. Ease and speed of execution.
5. Absolute reliability.
6. To carry out welding, it is not necessary to completely dig up the pipe, it suffices to uncover its upper part.
7. Competitive price.
8. The same kit can be used in pipes of different diameters (see).
9. Possibility of providing kits that can be used with cables of different sections.
10. Possibility to light the charge remotely.
11. Possibility of being used on active pipes without having to cancel the supply or transport.

# Method of welding ELPA

## Method for welding electrical connections of copper cable to the rail pad

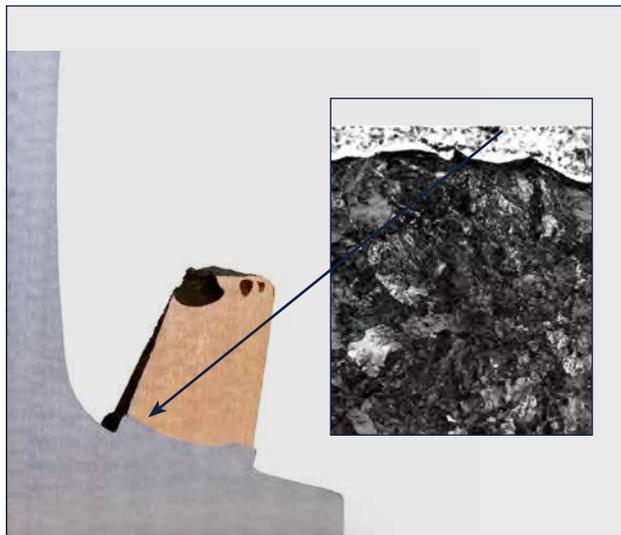

The **ELPA KLK-weld** soldering process offers the best solution for soldering copper cables to the rail base. The result is a connection with a very low electrical resistivity and a high mechanical resistance without modifying the steel of the rail because its temperature never exceeds 600 °C.

## 7. Copper aluminothermic welding /

7.12 ELPA

The electrical resistance in the connection is less than  $10^{-5} \Omega$ , and the mechanical shear resistance in the rail / plate joint is greater than 50 kN.

Unlike other welding processes, the **ELPA KLK-weld** process does not alter the steel of the rail. A micrographic study of the capillary weld connection between the plate and the rail reveals that the steel structure of the rail remains unaltered and free of microcracks.

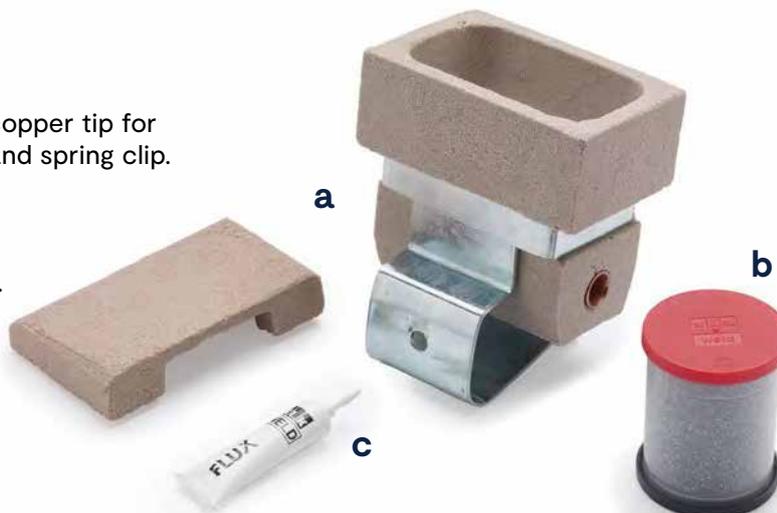

The **ELPA KLK-weld** welding process combines aluminothermic welding processes and soldering by tin / silver brazing. The second takes advantage of the heat produced by the first. A small plate placed between the cable and the rail pad absorbs the heat of the aluminothermic reaction and remains welded to the end of the cable. The plate is made of a tin / silver alloy on the side of the rail. The final union between the plate and the rail is produced by the combination of the heat which melts the alloy and the force of the spring clip which presses the plate against the rail during the solidification process.

The spring clip acts as a system for fixing the mold to the rail pad, being this system valid for most rail profiles.

The **ELPA KLK-weld** Kit includes:

- a. Sand mold with steel plate, copper tip for cable entry, metal disc, cover and spring clip.
- b. Cartridge with solder powder and the ignition powder.
- c. Flow dose.
- d. Notice - Instructions for use.

**ELPA KLK-weld** kits are specifically manufactured for use with copper cables of sections 10 to 240 mm<sup>2</sup>. They can be used on most rails: AREA, BS, UIC, U, S, RN, etc. Examples of possible kits are:

Denomination	Application (*)
Kit ELPA 10	Copper cable 10 mm <sup>2</sup> (Ø4,05 mm)
Kit ELPA 35	Copper cable 35 mm <sup>2</sup> (Ø7,6 mm)
Kit ELPA 50	Copper cable 50 mm <sup>2</sup> (Ø9,2 mm)
Kit ELPA 70	Copper cable 70 mm <sup>2</sup> (Ø10,9 mm)
Kit ELPA 95	Copper cable 95 mm <sup>2</sup> (Ø12,6 mm)
Kit ELPA 120	Copper cable 120 mm <sup>2</sup> (Ø14,3 mm)
Kit ELPA 150	Copper cable 150 mm <sup>2</sup> (Ø15,6 mm)
Kit ELPA 185	Copper cable 185 mm <sup>2</sup> (Ø17,6 mm)
Kit ELPA 240 R	Copper cable 240 mm <sup>2</sup> (Ø20,0 mm)
Kit ELPA 240 F	Câble en cuivre 240 mm <sup>2</sup> (Ø23,0 mm)
Kit ELPA 12	Bolt Ø12 mm (**)

(\*) Consult in case of other sections and / or diameters.

(\*\*) The bolt can be welded to an aluminum cable or be part of a Cu Al bimetal terminal.

There is the possibility of using the **LsVIP KLK-weld** ignition procedure which avoids the escape of projections from the crucible, reduces smoke emissions and makes it possible to ignite at a certain distance. For this, the following elements are necessary:

- a. Cover ELPA LsVIP.
- b. Remote ignition device.
- c. Fuses (one unit per weld).

# Simple and easy to use

## Advantages of the procedure ELPA welding

The advantages of this low temperature welding procedure, which we have commercially called ELPA are listed below:

1. The connections obtained have excellent electrical conductivity.
2. The connections obtained have a high mechanical resistance.
3. The internal structure of the rail steel is not changed.
4. Excellent behavior against corrosion.
5. Ease and speed of execution.
6. Absolute reliability.
7. Ability to activate charging remotely.
8. Competitive price.

Notes

Blank lined area for notes, consisting of alternating light and dark grey horizontal bands.

UL certificate in several  
copper welding references.
